

Case Study

PMA INTERIOR e.U.

Industry

Project Management and Construction Supervision for Interior Finishing

Location

Mödling, Lower Austria

Company size

Sole Proprietorship

docu tools Use Cases

Construction documentation, defect management, task management, project communication, reporting

PMA
INTERIOR

For me, docu tools is the only software on the market that's truly designed for the construction site. It's simple, intuitive, and can be used right where I work. That's exactly what I need in practice.

Andreas Peter, Owner of
PMA INTERIOR e.U.

Digitally Organized: How PMA INTERIOR e.U. Uses docu tools to Stay on Top of Interior Design Projects

PMA INTERIOR e.U. specializes in project management and construction supervision for interior fit-out projects and handles both domestic and international projects of various scales. The company is primarily called upon when interior design projects are organizationally complex and require the coordination of multiple trades.

Since 2020, owner Andreas Peter has relied on docu tools to handle construction documentation, defect management, and task management in a structured manner. The plan-based recording system, featuring photo documentation, clear assignment, and timestamps, ensures transparency, reduces coordination efforts, and significantly increases response times.

The Challenge

- Complex interior construction projects require clear structures
- Coordination of numerous trades
- Coordination of multiple subcontractors
- Stringent documentation requirements
- Traceable evidence preservation
- Simultaneous management of multiple projects

The Solution

- Efficient project management with docu tools
- Centralized digital platform for tasks and defects
- Plan-based recording with photo documentation
- Clear assignment of responsibilities
- Automatic timestamps for traceable documentation
- Fast report generation directly from the construction site
- Significant reduction in administrative effort
- For a large hotel project in Ingolstadt, over 200,000 to 250,000 photos and approximately 8,000 to 9,000 digital pins were documented. Despite this volume of data, the system remained stable and efficient.

Current Situation and Outlook

PMA INTERIOR e.U. now operates entirely digitally when it comes to construction documentation. According to Andreas Peter, the organizational effort required for large projects is reduced by at least half. docu tools remains his go-to tool for efficient project management on the construction site.

Schedule a consultation today and see for yourself the benefits of digital construction documentation!
